POKHRAJ CHAUDHURI

Principal Engineer/ Hands-on Architect

+91 7259359389 | pokhraj.chaudhuri@gmail.com | in LinkedIn | Bold

Leveraging deep expertise in cloud-native architectures, led omnichannel web and mobile development with personalized experience, , digital marketing, Generative AI, Site Reliability Eng and Observability to design and deliver secure, scalable, and high-performance enterprise solutions. Aiming to enable data-driven decision-making, accelerate digital transformation, and mentor high-performing engineering teams while aligning technology strategy with business outcomes.

Core Competencies

- Microservices & API-Driven Architecture
- Enterprise Architecture
- Enterprise Cloud Migration Architect - AWS, GCP and OCP
- Full Stack Engineering - Backend & Frontend
- Generative AI
- DevOps & CI/CD Automation
- Site Reliability Engineering & Observability
- Digital Transformation - Web, Mobile API Integation
- Programming Languages - Java, Python
- Data Architecture
- Data Strategy
- Big Data Platforms
- Cloud Migration & Cost Optimization

Education

2025
Post Graduate Certification Program, Artificial Intelligence and Machine Learning
BITS, Pilani

2005
B.Tech. (Information Technology)
College of Engineering & Management

Profile Summary

- **Visionary Principal Engineer & Enterprise Architect with nearly 20 years of experience** driving large-scale cloud-native, web & mobile API, digital marketing and GenAI-enabled transformations across global banking, fintech and public sector enterprises, delivering measurable business and operational impact.
- **International Exposure:** France & Netherland in Airbus & CANON Europa projects.
- **Strategic Technology Leader** with proven expertise in defining and executing enterprise strategies, On Prem to cloud migration roadmaps across different Cloud Platforms like – AWS, OCP and GCP Java Full web & mobile applications- Lift & Shift, re-platform and retire ensuring scalability, security, consistency, observability and compliance, adopting blue green deployment, canary deployment models.
- **GenAI Transformation Champion,** spearheading end-to-end design, governance, and rollout of enterprise-grade Generative AI - Java, Python and Angular based Full Stack solutions including log intelligence incident resolution—ensuring Observability and Security.
- **Ideate GenAI driven metadata Search-** to help Analysts to migrate Legacy applications
- **Full-Stack & Data Engineering Authority** Introduced Java Angular Full Stack solution to expedite data Engineers work to migrate the data from On Prem to Cloud.
- **Cloud & DevOps Evangelist** with deep hands-on leadership in CI/CD automation, Kubernetes, Docker, Airflow, Jenkins, Git, and Infrastructure-as-Code, achieving cost optimization & developer productivity gains through automation and self-service platforms.
- **Trusted Technical Leader & Mentor,** adept at leading globally distributed, cross-functional Agile teams, collaborating with product, business, security, and compliance stakeholders to deliver mission-critical, production-scale solutions with high reliability and accelerated time-to-market.

Technical Skills

Category	Technologies / Tools
Programming Languages	Java, Python
Application Framework etc.	Spring boot, REST API, Microservices, Swagger
Data Engineering/Strategy	Big data/ Hadoop, Spark, SQL, Apache Airflow, DAG, Autosys
Event Driven Platform	Kafka, GCP Pub/Sub
Database/ Datastore	Mongo DB, Hive, Oracle, Redis
DevOps, CI-CD	GIT, Jenkins, CloudFormation, Docker, Kubernetes
Cloud	**AWS**- EC2, ECS, EKS, S3, IAM, Infrascture as Code- Cloud Formation **GCP**- Big Query, GCS, Serverless- Cloud Function
UI / Mobile App	Angular, JavaScript, Android & IOS App Development
Containerization	Docker, Kubernetes
Security	OAUTH2.0, AWS Cognito, Single Sign On
Observability/Monitoring	Splunk, AppDynamics, Grafana, Prometheus

Career Timeline

Certifications

- AWS Certified Cloud Practitioner, 683NYKCDJN1EQC9Q
- Google Cloud Digital Leader Certified
- Adobe Real-time CDP Business Practitioner Professional Certification
- Hacker Rank Java Basic Certificate, Link
- ITIL Certification
- Programmer
- Microservice Solution Program, Wipro Internal using Spring boot/ Microservice
- Oracle Web Center Portal Certification
- Oracle ADF Certification
- Sun Certified Java

Award & Accolade

Secured **3rd place** in the Wells Fargo **Global Technology Hackathon**.

Spotlight Awards- Consistently recognized for excellence with multiple awards across Wells Fargo, Wipro, Accenture, and TCS, highlighting **strengths in execution** and building **high performance teams**.

Soft Skills

- Analytical Problem Solving
- Innovation
- Collaboration
- Team Building & Interpersonal Skills
- Negotiation & Conflict Management
- Visionary and Decision Making
- High Business Ethics & Trustworthy
- Leadership and Delegation

Personal Details

Date of Birth: 2nd July 1982

Languages Known: English, Hindi & Bengali

Address: Bangalore, Karnataka, 560045

Work Experience

Wells Fargo, Bengaluru **Since Jan'22**
Principal Engineer
Key Result Areas:

- Led enterprise cloud modernization initiatives, migrating 50+ applications to cloud-native architectures, improving system resilience by 30% and optimizing infrastructure costs by 25% by implementing FinOps frameworks to align cloud infrastructure spend with EBITDA goals and BIAN-compliant standards.
- Championing GenAI Log Analysis and Observability Full Stack solutions to streamline root-cause analysis and optimize L1, L2 and L3 PROD support. Achieved 3,000+ hours/month effort reduction and a 50% uplift in operational efficiency.
- Architect, design and implement GenAI driven Metadata Search Full Stack UI- using RAG & Vector DB to help analysts to migrate the Legacy applications. It minimized analyst effort drastically to find out any duplicate attributes and Tables across the Legacy applications.
- Pioneered real-time, event-driven data architectures leveraging MongoDB Change Streams, Apache Kafka, Java, Spring Boot microservices, and Change Data Capture patterns to enable low-latency data propagation and system scalability. It reduced the overall processing time for Marketing Offer data processing by 85% and reduced the Time to market by 75%
- Secured 3rd position at the Wells Fargo Global Technology Hackathon with a cutting-edge omni-channel smart meeting solution spanning Web, Mobile, and QR Code experiences.
- Provided strategic technology leadership across cross-functional teams, enforcing data governance, security, and compliance standards with 100% regulatory adherence and improving delivery velocity by 40%.

Wipro Ltd, Bengaluru **Aug'18 to Jan'22**
Architect
Key Result Areas:

- Led the Scalable Spring boot microservice Payment Product Configuration application migration from On Prem (PCF) to GCP Appengine for Bank of New York Mellon project
- Architected and spearheaded Qatar Post's digital transformation program, delivering enterprise-grade B2B and B2C (https://qatarpost.qa) portals alongside mobile platforms including Payment Gateway. Served as Integration Architect and offshore Delivery SPOC, ensuring seamless system interoperability, stakeholder alignment, and successful end-to-end execution.

Previous Experience

Duration	Company	Role	Location
Aug'18 – Jan'22	Wipro Limited	Architect	Bengaluru
Dec'15 – Aug'18	Accenture	Team Lead	Bengaluru, France
Jun'10 – Dec'15	Tata Consultancy Services	Assistant Consultant	Kolkata, Amsterdam
Dec'07 – Jun'10	Wipro Limited	Analyst Programmer	Kolkata
Dec'06 – Dec'07	Systems Incorporate India Pvt. Ltd.	Software Engineer	Kolkata
Mar'06 – Dec'06	Karmick Solutions Pvt. Ltd.	Software Engineer	Kolkata

Annexure

Company: Wells Fargo
Project: Consent Engine Java Microservices (50+ application) Migration from PCF to OCP
Period: June 2025 – Dec 2025
Designation: Principal Engineer
Team Size: 5

Project Overview: Led below tasks to perform by introducing the Automation to performed repeated tasks and ensuring the NFR(s)- performance, security and scalability

i) Lift & Shift migration
ii) Replat form – by introducing Mongo to Kafka Source connector
iii) Retire
iv) Docker file
v) Kubernetes configurations
vi) Ensuring NFR(s) – like performance, scalability, security

Key Migration Model:
- Blue Green Deployment
- Canary Deployment

Technologies: Java, Spring boot, Microservice MongoDB, Kafka, Docker, Kubernetes, PCF, OCP (OpenShift Cloud Platform) Jenkins, Git, Gradle,

Roles & Responsibilities:
- Planning and design migration strategies.
- Pioneered the Automation to change the config files.
- Led the delivery ensuring the NFR(s).

Company: Wells Fargo
Project: Mongo-Kafka Custom Source Connector for Flex Loan and WIM Bulk Uploader
Period: Jan 2022 – Jan 2023
Designation: Lead Developer

Project Overview: Developed and deployed a Mongo-to-Kafka custom source connector to support Flex Loan and Wealth & Investment Management (WIM) use cases, enabling real-time data flow and efficient customer eligibility determination.

Key Business Use Cases:

Flex Loan Use Case:
- Integrated MongoDB with Kafka to automatically push customer data once marketing traits and other information are added to Mongo collections.
- Facilitated Master Customer Record (MCR) generation, which determines eligible customers for Flex Loans.
- Streamlined real-time data processing, reducing latency in eligibility determination.

Wealth & Investment Management (WIM) Bulk Uploader:
- Developed a bulk uploader to efficiently ingest large datasets into the WIM platform, improving operational efficiency.

Roles & Responsibilities:
- Designed and implemented the custom Mongo-Kafka connector microservice
- Architected solutions to automate real-time data ingestion and processing
- Led development and testing for both Flex Loan and WIM use cases
- Ensured integration with downstream systems for seamless data flow

Technologies: MongoDB, Kafka, Microservices, Java, Spring Boot, Big Data/Hadoop ecosystem

Company: Wells Fargo
Project: GenAI Use Case – Log Analysis and Resolution Assistant
Period: July 2025 – Dec 2025
Designation: Principal Engineer
Team Size: 3

Project Overview: Developed a GenAI-driven solution to automate log retrieval and analysis, significantly reducing manual effort and accelerating incident resolution. Achieved a 50% efficiency gain for L1 & L2 support teams and L3 developers in production support and root cause analysis.

Key Features & Contributions:
- **Automated Incident Management:** Integrated with ServiceNow and Tachyon to streamline the incident lifecycle.
- **AI-Powered Log Analysis:** Leveraged GenAI models to identify anomalies, suggest resolutions, and reduce manual troubleshooting.
- **Operational Efficiency:** Reduced response and resolution times, enabling faster production support and minimizing downtime.
- **Governance & Compliance:** Managed documentation, security approvals, and alignment with the GenAI Council.

Technologies: ServiceNow, Autosys, Big Panda, Ansible Scripts, Python, Gemini 2.5 Flash Lite, Angular, Spring Boot, REST APIs

Roles & Responsibilities:
- Led ideation, architecture, POC, and solution design for the GenAI use case.
- Resolved complex technical and implementation challenges.
- Oversaw documentation, security reviews, and GenAI Council approvals.

Company: Wells Fargo
Project: GenAI Use Case – Metadata Search UI
Period: Dec 2025-Till Date
Designation: Principal Engineer
Team Size: 3

Project Overview: Legacy applications like Hemi Teradata – filed name and table names are not matching with the Enterprise Data Lake corresponding attributes and tables. Hence, Analysts need to spend a good amount of time to find out the legacy table, attributes and data. It's pain to decommission some of the legacy application.
Ideate GenAI powered UI Streamlit UI applications to help analysts to find out the items.

Key Features & Contributions:
- **Automated Incident Management:** Find out the common attributes across Hemi Teradata and EDL .
- **Later it can be leveraged for other data sources**

Technologies: Python, Streamlit, RAG, Gemini 2.5 Flash Lite, Angular

Roles & Responsibilities:
- Led ideation, architecture, POC, and solution design for the GenAI use case.

Company: Wells Fargo
Project: Data Delivery Automation – Full-Stack Self-Service Portal for Ground-to-Cloud (GCP) Data Ingestion & Curation
Period: Jan 2025 – Present
Designation: Principal Engineer

Project Overview: Designed and deployed an automated end-to-end data pipeline for ingestion and curation, significantly reducing manual effort for developers and improving productivity by ~50%.

Key Contributions & Features:

Intake Process Automation:
- Integrated with Jira to streamline intake requests
- Implemented end-to-end automated workflow for intake and approvals
- Automated pre-work documentation, including technical metadata and compliance requirements

Accelerated Code Development:
- Automated generation of code artifacts to reduce manual coding efforts.
- Integrated with GitHub for version control and collaboration.
- Configured Jenkins for automated build creation.
- Implemented UCD (UrbanCode Deploy) integration for seamless deployment.

Impact:
- Increased developer efficiency and reduced manual intervention by 50%.
- Enabled a self-service portal for faster, consistent, and reliable data delivery.

Technologies: Spring Boot, Microservices, Java, Hadoop, Hive, MongoDB, Jenkins, Git, Gradle, Angular, Big Data/Hadoop ecosystem, EDL, Autosys scripting, Apache Airflow, DAG, Big Query, Python, Cloud Function

Roles & Responsibilities:
- Defined data strategy and designed end-to-end data pipelines.
- Served as solution architect and led POCs for technical feasibility.
- Led four L1 Scrum development teams, overseeing execution and delivery.
- Resolved complex technical implementation challenges.
- Implemented and optimized DevOps CI/CD pipelines.

Company: Wells Fargo
Project: Approved Dataset Buildout in GCP
Period: Nov 2024 – Present
Designation: Principal Engineer
Team Size: 15

Project Overview: Designed and implemented data pipelines to support diverse cloud data migration patterns, including historical and incremental data transfers from multiple sources to GCP.

Key Migration Patterns:
- EDL to GCP – Historical data migration
- RDBMS (EDL/Teradata/Oracle/SQL Server) to GCP – Incremental loads
- File systems to GCP – Historical and incremental ingestion
- Teradata to GCP – Historical migration

Technologies: GCP Big Query, Data Plex Universal Catalog, Pub/Sub, Apache Airflow, DAG, Apache Spark, PyArrow, MAPR DistCp, GSUtil, Hadoop, Hive, Java, MongoDB, Jenkins, Git, Gradle, Big Data/Hadoop ecosystem, EDL, Autosys scripting, Cloud Function, Apache Airflow, DAG, Big Query, Python

Roles & Responsibilities:
- Defined data strategy and designed end-to-end data pipelines for cloud migration.
- Acted as solution architect and drove POCs for technical feasibility.
- Led four L1 Scrum development teams, overseeing planning, execution, and delivery.
- Resolved complex technical challenges across pipeline development and integration.
- Implemented and optimized DevOps CI/CD pipelines for automated deployments.

Company: Wells Fargo
Project: Marketing Data Integration with Adobe Experience Platform (AEP) and Digital Marketing
Period: Nov 2023 – Jan 2024
Designation: Principal Engineer
Team Size: 7

Project Overview: Designed and implemented a robust data pipeline to integrate marketing data from EDL and GCP into the Adobe Experience Platform (AEP), enabling unified data-driven marketing insights and improving campaign effectiveness.

Technologies: Adobe Experience Platform (AEP), Apache Spark, Java, PyArrow, GSUtil, Hadoop, Hive, MongoDB, Jenkins, Git, Gradle, Big Data/Hadoop ecosystem, EDL, Autosys scripting

Roles & Responsibilities:
- Defined data strategy and designed end-to-end data pipelines for marketing data integration.
- Served as solution architect and led POCs to validate technical feasibility.
- Led four L1 Scrum development teams, ensuring timely delivery and adherence to best practices.
- Resolved complex technical implementation challenges across data ingestion, transformation, and integration.
- Implemented and optimized DevOps CI/CD pipelines for automated deployments.

Company: Wells Fargo
Project: Apache Spark Data Pipeline Implementation for Marketing Utility & Eligibility Utility (Flex Loan, Cash Offer, Rate Sale)
Period: Jan 2023 – Present
Designation: Lead Developer
Team Size: 15

Project Overview: Designed and implemented high-performance Apache Spark data pipelines integrated with a Rules Engine to generate marketing traits and determine customer eligibility across multiple business use cases. The solution enabled same-day trait generation for active and inactive customers, significantly reducing Time-to-Market compared to the prior microservices-based Mongo/Kafka architecture.

Key Business Use Cases:

Marketing Utility:
- Generates Marketing Traits for all customers to identify eligible candidates for Flex Loans.
- Achieves same-day trait generation, meeting business requirements previously unattainable with legacy architecture.
- Reduces Time-to-Market for marketing campaigns.

Credit Card Cash Offer & Rate Sale:
- Leverages Spark and Rules Engine integration (CoBRRa) to determine eligible customers for campaigns.
- Supports multiple Consumer Data Platform (CDP) use cases in development and testing environments.

Technologies: Apache Spark, CoBRRa, Hadoop, Hive, Java, MongoDB, Jenkins, Git, Gradle, Big Data/Hadoop ecosystem, EDL, Autosys scripting

Roles & Responsibilities:
- Architected solution design and led POCs to validate technical feasibility.
- Designed end-to-end Spark data pipelines integrated with the Rules Engine.
- Served as Lead Developer, guiding implementation and best practices.

Client/Company: Bank of New York Mellon
Project: Hadoop Integration POC with EPH Report Application
Period: May 2021 – Jan 2022
Designation: Consultant / Lead Developer
Team Size: 5

Project Overview: Implemented a REST API-based integration to connect the EPH Report Application with Hadoop Impala DB as an alternative to EDW, enabling faster data access and streamlined reporting.

Technologies: Java 8, Spring Boot, REST Services, Impala DB, Sqoop, Docker, App Engine, Jenkins, Git, Angular 8

Roles & Responsibilities:
- Acted as Consultant and Technical Lead for solution design and development.
- Designed and implemented REST API integration using best practices.
- Coordinated with DevOps, Business, Product Owners, and Scrum Masters to ensure smooth delivery and alignment with project goals.

Client/Company: Bank of New York Mellon
Project: Jenkins to GitLab CI/CD Migration
Period: Jan 2021 – Jun 2021
Designation: Lead Developer
Team Size: 5

Project Overview: Led the migration of CI/CD pipelines from Jenkins to GitLab, ensuring seamless transition while maintaining automated build, test, and deployment workflows.

Technologies: Spring Boot, Docker, App Engine, Kubernetes

Roles & Responsibilities:
- Served as Technical Lead, driving solution design and implementation.
- Designed and implemented CI/CD pipelines using best practices.
- Coordinated with DevOps teams, Business stakeholders, Product Owners, and Scrum Masters for smooth migration.
- Ensured pipeline reliability, automation, and integration with existing applications.

Client/Company: Bank of New York Mellon
Project: Payment Product Configuration (PPC) – ISO Implementation, Brexit, COB
Period: Jan 2020 – Jan 2021
Designation: Lead Developer
Team Size: 5

Project Overview: Developed and enhanced the Payment Product Configuration application, responsible for calculating charges during fund transfers while adhering to SWIFT ISO 20022 standards, Brexit compliance, and COB processes.
Also, converted this application from SOAP based monolithic application cloud native REST API and deployed this from On Prem to GCP App Engine

Technologies: Java 8, Spring, SOAP & REST Services, Oracle, Docker, App Engine, Jenkins, Git, PCF

Roles & Responsibilities:
- Acted as Technical Lead overseeing architecture, design, and development.
- Implemented best practice solutions for payment charge calculations and compliance requirements.
- Coordinated with DevOps, Business, and Scrum teams for deployment and alignment.
- Ensured reliable integration with external systems and standards compliance.

Client/Company: Royal Bank of Scotland
Project: FX Closing Rate
Period: Dec 2019 – Mar 2020
Designation: Architect
Team Size: 10

Project Overview: Architected and prepared a multi-component FX Closing Rate application for production deployment on PCF (Pivotal Cloud Foundry). The system orchestrates FX rates, calendar calculations, and publication of closing rates across multiple channels.

Key Components:
- UI (Angular) – Front-end components
- Client Gateway – Request routing
- Closing Service – Workflow management & system orchestration
- Rate Service – In-app FX rate calculations
- Date Service – Calendar provider
- Provide Service – Publishes data to various channels
- Bridge Service – Fetches and persists data to MDX (primary datasource)

Technologies: Spring Boot, REST Services, Angular 8, PCF

Roles & Responsibilities:
- Reviewed and optimized architecture for production readiness.
- Analyzed Non-Functional Requirements (NFRs) to ensure scalability, reliability, and performance.
- Oversaw microservices deployment in PCF, including environment setup and UAT deployments using DWS commands.
- Implemented monitoring tools like Splunk and AppDynamics for application and environment health.

Client/Company: QatarPost
Project: Digital Implementation (https://qatarpost.qa)
Period: Aug 2018 – Present
Designation: Architect
Team Size: 20

Project Overview: Led the digital transformation initiative for QatarPost, implementing multiple digital channels including the corporate website, B2B portal, mobile app, and e-commerce webstore. Delivered an end-to-end solution encompassing self-service tools, product catalogs, customer support, and transactional functionalities.

Scope & Features: Digital Channels: Website, B2B Portal (Business Customers), Mobile App, Magento Webstore (E-commerce)

Functional Areas: Branch information and locator

Self-service tools:
- Track & Trace, Add-on Services, Price Calculators, Appointment Booking
- Product/Service recommendations and offers
- Mobile registration and login

Support services:
- Feedback, inquiries, complaints, claims
- Label creation and invoice/payment/transaction viewing
- Payment Gateway Integration

Technologies: Spring Boot, Java REST Services, Hibernate, JPA, Oracle WebCenter Portal 12c, Oracle WebCenter Content 11g/12c, Oracle ADF 12c, WebLogic Server Administration 12c, Java 8, REST APIs, Angular 5, Ionic, Cordova, Android

Roles & Responsibilities:

- Served as Lead Architect and Offshore Technical Manager, accountable for end-to-end solution delivery.
- Designed and implemented REST API integrations across all digital channels (B2B Portal, B2C Website, Magento E-commerce, Mobile App).
- Developed key functionalities including order management, branch locator, track & trace, registration/login, and transactional services.
- Conducted requirement analysis and solution design in collaboration with business and design teams.
- Managed WebLogic server administration and ensured system stability.
- Acted as the single point of contact for offshore technical coordination, ensuring timely and high-quality project delivery.

Client/Company: Swisscom
Project: E-Commerce Portal (DOCP)
Period: Jan 2017 – Dec 2017
Designation: Team Lead
Team Size: 10

Project Overview: Led the design and implementation of a full-stack e-commerce portal for Swisscom, delivering a robust platform for online sales, content management, and customer engagement. The portal supports multiple payment options, SEO-optimized search, and analytics capabilities.

Portal Users: Swisscom customers

Key Features & Functionalities:
- **Content Management:** Manage and update portal content efficiently.
- **Promotions & Discounts:** Tools for applying promotion codes and offers.
- **User-Friendly Checkout:** Streamlined and intuitive checkout experience.
- **Search Optimization:** Federated search to index portal content for fast and accurate results.
- **Reporting & Analytics:** Tools to track user activity, transactions, and performance.
- **Payment Options:** Supports multiple payment methods including Credit Card, PayPal, PO, and Terms.
- Payment Gateway Integration

Technologies: Angular 4, HTML5, CSS3, Bootstrap 4, Spring Boot, REST APIs, Postman

Roles & Responsibilities:
- Conducted requirement analysis with business teams and stakeholders.
- Designed solutions collaboratively with design and business teams.
- Acted as Architect and Technical Lead, overseeing development, integration, and delivery.

Client/Company: Airbus
Project: Airbus World Search Portal
Period: Jan 2018 – Apr 2018
Designation: Team Lead
Team Size: 5

Project Overview: Led the migration of Airbus World Search functionality into a Single Page Application (SPA) portal, enhancing search performance, user experience, and content discoverability.

Portal Users: Airbus customers, portal administrators, and contributors

Key Features & Functionalities:
- **Federated Search:** Provided advanced search capabilities across multiple content sources; crawled and indexed portal content for fast and accurate results.
- **Enhanced User Experience:** SPA architecture for seamless navigation and responsive design.
- **Content Management:** Improved access and management for administrators and contributors.

Technologies: Angular 4, HTML5, CSS3, Bootstrap 4, IBM Watson, REST APIs

Roles & Responsibilities:
- Conducted requirement analysis with business teams and stakeholders.
- Designed solutions collaboratively with design and business teams.
- Served as Architect and Technical Lead, overseeing implementation, integration, and delivery.

Client/Company: Airbus
Project: Chatbot in AirbusWorld Portal
Period: May 2018 – Present
Designation: Team Lead
Team Size: 2

Project Overview: Led the development of a GenAI-powered chatbot integrated into the AirbusWorld portal to function as a helpdesk for access-related issues, improving user support efficiency and reducing manual intervention.

Portal Users: Airbus customers, portal administrators, and contributors

Key Features & Functionalities:
- **Federated Search:** Advanced search capabilities across portal content; crawls and indexes content for accurate results.
- **Support Automation:** Chatbot assists users with access issues and general queries.
- **Enhanced UX:** Responsive interface built for seamless interaction.

Technologies: Angular 4, HTML5, CSS3, Bootstrap 4, IBM Watson, REST APIs

Roles & Responsibilities:
- Conducted requirement analysis with business stakeholders.
- Designed solutions collaboratively with design and business teams.
- Served as Architect and Technical Lead, overseeing implementation and integration

Client/Company: Airbus
Project: New AirbusWorld Portal
Period: Oct 2017 – Present
Designation: Team Lead
Team Size: 10

Project Overview: Led the design and implementation of the New AirbusWorld Portal, a global, internet-accessible platform for Airbus customers, operators, MROs, and authorities. The portal acts as a single point of contact, providing secure access to Airbus information, content, and applications 24/7.

Portal Users: Airbus customers, portal administrators, and contributors

Key Features & Functionalities:
- **Federated Search:** Advanced search capabilities, indexing content across multiple sources
- **Content Management:** Administrators manage workflows, authorization, and portal configurations; contributors add news, documents, and updates
- **Global Accessibility:** Secure internet-based access for users worldwide, ensuring 24/7 availability
- **Integration:** Portal aggregates data from multiple Airbus applications via cockpit components

Technologies: Oracle WebCenter Portal 11g, Oracle WebCenter Content 11g (UCM), Oracle ADF, WebLogic Server Administration, Java Web Services, Jenkins

Roles & Responsibilities:
- Conducted requirement analysis and solution design with business and design teams.
- Acted as Architect and Technical Lead for Oracle ADF, WebCenter Portal, and WebCenter Content (UCM).
- Managed WebLogic Server administration and setup of Dev and DRP environments.
- Ensured high availability and seamless integration across portal components.

Client/Company: Geological Survey of India
Project: OCBIS Portal (https://www.gsi.gov.in)
Period: Dec 2015 – Sep 2017
Designation: Module Lead & Technical Lead
Team Size: 20

Project Overview: Led the design and implementation of the OCBIS Enterprise Portal, a unified, single-access platform providing integrated GSI information, processes, and data. The portal supports single sign-on (SSO) with multiple applications, integrates GIS and document management systems, and enables authorized users to manage content and personal information efficiently. This initiative digitized GSI operations, making research reports publicly accessible, promoting investment in India's mining industry, and facilitating a paperless workflow.

Key Features & Functionalities:
- Unified portal with Portal Pages, Page Templates, Navigation Model, and Page Hierarchy.
- **Content Management:** Integration with WebCenter Content (UCM) for static content, images, videos, and documents; WYSIWYG editor for authorized users.
- **WebCenter Services Integration:** Poll Taskflow, Announcement Taskflow, RSS Viewer.
- **ADF & BPM Integration:** Custom taskflows for business processes.
- **GIS Integration:** WebCenter Portal & Content integration with GIS (Intergraph).
- **Analytics & Monitoring:** WebCenter Analytics, traffic tracking.
- **Single Sign-On:** Integration across WebCenter Portal, ADF applications, and GIS using Oracle Access Management (OAM).

Technologies: Oracle WebCenter Portal 11g, Oracle WebCenter Content 11g (UCM), Oracle ADF, Java Web Services, Oracle BPM, Oracle Access Management (OAM), Jenkins, SONAR, GIS, Intergraph GIS, HTML5, CSS3, jQuery

Roles & Responsibilities:

- Conducted requirement analysis and led architecture & solution design for WebCenter Portal and Content (UCM).
- Led installation, technical implementation, and integration across multiple ADF projects.
- Implemented SSO and BPM workflow automation from ADF applications.
- Managed DevOps pipeline setup using Jenkins and SONAR for automated deployment.

Client/Company: Geological Survey of India
Project: Virtual Museum (http://museum.gsi.gov.in)

Period: Feb 2016 – Sep 2017
Designation: Application Lead
Team Size: 2

Project Overview: Led the development of the Virtual Museum, digitizing GSI's curatorial collections of rocks, minerals, fossils, and meteorites. The platform provides public access to geological exhibits and national geological monuments, enhancing education, research, and preservation efforts.

Key Features & Functionalities:

- Digital representation of Siwalik Fossil Gallery, Invertebrate Fossil Gallery, Rock & Mineral Gallery.
- Integration of models, maps, and specimen data into WebCenter Sites.
- Content management for rock, mineral, fossil, and meteorite repositories.
- Public access to 26 National Geological Monuments and museum collections.

Technologies: Oracle WebCenter Sites 11g, Oracle WebCenter Content 11g

Roles & Responsibilities:

- Conducted requirement analysis and defined technical architecture and design.
- Led initial installation and implementation of WebCenter Sites.
- Acted as Technical Lead and L2 Support Lead for ongoing portal operations.

Client/Company: Geological Survey of India
Project: Co-Innovation with GSI – Mobile GeoInfo Application

Period: Mar 2017 – Apr 2017
Designation: Application Lead

Project Overview: Led the development of a mobile application prototype to provide location-specific geological information based on GSI data and crowdsourcing. The app delivers real-time insights on landslide hazards, earthquakes, and chemical/surface data (e.g., rock types, arsenic presence) for any selected location.

Key Features & Functionalities:

- **GeoInfo Access:** Retrieve geospatial data for hazards, minerals, and environmental information.
- **Crowdsourcing:** Incorporates user-generated data for enhanced accuracy.
- **Location Services:** Identify latitude and longitude for specific locations and nearby geological features.
- **Push Notifications:** Alerts users about relevant geological events or updates.

Technologies: Android Studio, Google Maps, Google Maps APIs (location search), Android APIs (location, media capture), Google Cloud Messaging (notifications), JSON Services, GIS

Roles & Responsibilities:

- Led application design and prototype development.
- Implemented location-based services and GIS data integration.
- Coordinated with GSI teams to ensure accurate data representation and usability.

Other Projects:

Canon Europa N.V.
Software Product Development Lead

Project: B2B Portal Development
Period: Aug 2014 – Dec 2015
Description: Developed WebCenter Portal to integrate with Siebel CRM for all business partners. Integrated major Siebel entities such as Service Requests and Activities with the portal via Middleware Web Services.

Project: Single Sign-On (SSO) using Ping Federate
Period: Jun 2014 – Aug 2014
Description: Led SSO implementation using Ping Federate to enable secure access across multiple applications.

Project: WebCenter Migration
Period: Apr 2014 – Jun 2014
Description: Managed migration of WebCenter applications ensuring minimal downtime and data integrity.

Scottish Water
Software Product Development Lead

Project: Metering to Market Data Submission Project
Period: Oct 2012 – Apr 2014
Description: Led development for Metering to Market data submission platform, ensuring accurate and timely reporting of water consumption data.

Project: Metering to Market Meter Inventory Project
Period: Aug 2012 – Oct 2012
Description: Managed Meter Inventory system to streamline meter management and reporting.

Citi

Project: CitiCARDS Internet Banking – Account Online Release Management/Support
Period: Jan 2011 – Oct 2012
Designation: Application Lead
Description: Managed release and support of online banking functionalities for CitiCARDS customers.

Project: CitiCARDS Internet Banking – Dynamic Navigation & Menu Implementation
Period: Jun 2010 – Jan 2011
Designation: Application Designer
Description: Designed and implemented dynamic navigation and interactive menu structures to enhance user experience in CitiCARDS online banking.

SREI Sahaj E-village Ltd.
Application Developer

Period: Jul 2008 – Jun 2010
Project: SREI Sahaj E-village Ltd.
Description: Developed applications supporting rural e-governance initiatives and digital inclusion projects.

Government of Assam

Application Developer
Project: Assam Tax Information Management System
Period: Dec 2007 – Jul 2008
Description: Developed tax information management system to digitize and streamline tax collection processes.

NTPC Ltd.

Application Developer
Project: Material Management System
Period: Dec 2006 – Dec 2007
Description: Developed Material Management System to optimize inventory and procurement processes.

Travis (via Guru.com)

Application Developer
Project: Community Site – theconnectioncenter.com
Period: Apr 2006 – Dec 2006
Description: Developed and maintained an online community portal with interactive features and user management.

Juniors Building Material

Application Developer
Project: Portal Development for Juniors Building Material
Period: Mar 2006 – Apr 2006
Description: Developed an internal portal for Juniors Building Material to streamline business operations.
